BASIC AUTOMATED BIRTH YEARBOOK

North Carolina Residents

1997

This report, referred to as *The Baby Book*, contains computer tables showing statewide counts and percentages for 1997 resident live births classified by selected infant and maternal characteristics. This volume and corresponding county microfiche are prepared and distributed for the use of maternal and child health programs and others interested in birth data.

This year's cover features Olivia Danielle Hager born January 26, 1997 as photographed by Jim Page, Public Affairs, Department of Environment and Natural Resources.

Olivia's mother is Evangela Hager. Evangela was a Statistician II at the State Center but has left to pursue other interests.

The pen and ink baby drawings on the divider pages were sketched by Gabrielle Principe of the State Center, who is Project Manager of the North Carolina Community Health Assessment Initiative.

DEFINITIONS

A **'live birth'** is the complete expulsion or extraction from its mother of a product of conception irrespective of the duration of pregnancy, which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or any definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. (Definition adopted by the World Health Organization in 1950.)

A **'not married'** mother is one who has never been legally married or who has been widowed or legally divorced from her husband for more than 280 days.

'Birth order' is the sum of all previous deliveries (live births plus other reported terminations, i.e., spontaneous and induced at any time after conception) plus the present live birth.

'Birth weight' is expressed in grams. A low-weight birth is defined as a live born infant weighing less than 2500 grams (5 pounds, 8 ounces or less) at birth, regardless of the period of gestation. (Birth Weight Index recommended by the expert group on prematurity of the World Health Organization, 1950.)

'Age of mother' is reported age in completed years at last birthday.

'Education of mother' is the number of years of schooling completed by the mother at time of the birth.

Beginning in 1990, the last seven tables of this report (Tables 16-22) provide new birth certificate items by birth weight by race. These pertain to medical history of the mother, maternal smoking and weight gain, obstetric procedures, events of labor and delivery, method of delivery, and conditions of the newborn. These items were added to the North Carolina birth certificate in 1988. In Tables 16 and 19-22, the row totals do not equal the total number of live births because some births involve multiple conditions.

RESIDENCE ALLOCATION

Births are assigned to the usual residence of the mother, regardless of the place of occurrence.

RACE ALLOCATION

Two broad categories, 'white' and 'minority,' are used. About 90 percent of the minority births in North Carolina are African American, and this category also includes births to American Indians and mothers of other races. Births to Hispanics (an ethnic group) are included mainly in the 'white' racial group. In cases of mixed parentage, the newborn is considered to be the race of the mother.

COMPLETENESS OF BIRTH REGISTRATION

Counts and percentages in this report are based on live births filed with the local registrar before April and processed in the state office prior to May of the year following the birth. The number filed subsequently is considered negligible for statistical purposes.

INSTRUCTIONS FOR READING THE TABLES

The page following the Table of Contents provides an example and instructions for reading the tables of this printout.

Listing of Cross Tabulations of Resident Live Births

Table	Page
1. Age of Mother by Birth Order by Marital Status by Race	1

20. Events of Labor/Delivery by Birth Weight by Race	122
21. Method of Delivery by Birth Weight by Race	125
22. Conditions of Newborn by Birth Weight by Race	128

Instructions for Reading the Tables

Example 1

Tables in this book produced by SAS System programming are of two basic types. Example 1 on this page is the first type. It is a tabulation of the resident births in North Carolina for selected criteria where each birth is counted only once in the table.

Section one of example 1 is the title and general description of the tables in a group. In example 1, we have resident births for the year 1997 with age of mother by birth weight in grams controlling for race.

Section two of example 1 is the specific variable that is controlled for the table. In example 1, the control variable is race equals minority.

Section three of example 1 is the table itself. At the top of this section is the name of the row variable and the name of the column variable. In example 1 the row variable is "Age" (age of mother) and the column variable is "Weight (Birth Weight)" (birth weight in grams).

The body of the table is divided into cells formed by dashed lines. Across the top are the values of the column variable (birth weight in grams). In example 1 these values are: Under 1,500 grams, 1,500-2,499 grams, 2,500 plus grams, unknown, and total. Down the left side are the values of the row variable (age of mother). In example 1 these values are: 21, 22, 23, 24, 25 thru 29, 30 thru 34, 35 thru 39, 40 thru 44, 45 or older, not stated, and total. Down the right side are the row totals. In example 1, row one, the total births to minority women 21 years old equals 2,097. Across the bottom are the column totals. In example 1, column one, the number of births to minority women where the birth weight is under 1,500 grams equals 1,019. The column totals are printed at the bottom of each page even though the table may continue on more than one page. The remaining cells each contain three numbers. The first number is the frequency (i.e., the number of births for the specified age and birth weight). The second number is the row percent (i.e., the percent of the specified age group that were of a particular birth weight). The third number is the column percent (i.e., the percent of specified birth weight group that were born to women of a particular age). To illustrate, in the upper left cell of example 1 are the numbers 63, 3.00, and 6.18. This means that 63 babies with a birth weight less than 1,500 grams were born to 21 year old minority women. It means that 3.00 percent or 63 of the 2,097 babies born to 21 year old minority women weighed less than 1,500 grams. It also means that 6.18 percent or 63 of the 1,019 babies that weighed less than 1,500 grams were born to 21 year old minority women.

Instructions for Reading the Tables

Tables in this book produced by SAS System programming are of two basic types. Example 2 on this page is the second type. It is a tabulation of the resident births in North Carolina for selected criteria where one birth may be counted more than once in the table.

Section one of example 2 is the title and general description of the tables in a group. In example 2, we have resident births for the year 1997 with conditions of the newborn by birth weight in grams controlling for race.

Section two of example 2 (the line just above the body of the table) is the specific variable that is controlled for in the table. In example 2, the control variable is race equals minority.

Section three of example 2 is the table itself. At the top of this section is the name of the row variable and the name of the column variable. In example 2 the row variable is "conditions of newborn" and the column variable is "birth weight in grams". Down the left side of the table (below row variable name) are the values of the row variable. In example 2 these values are: none, assisted ventilation, all others, one or more, unknown, and total. Across the top of the table (below column variable name) are the values of the column variable. In example 2 these values are: under 1,500 grams, 1,500-2,499 grams, 2,500 plus grams, unknown, and total

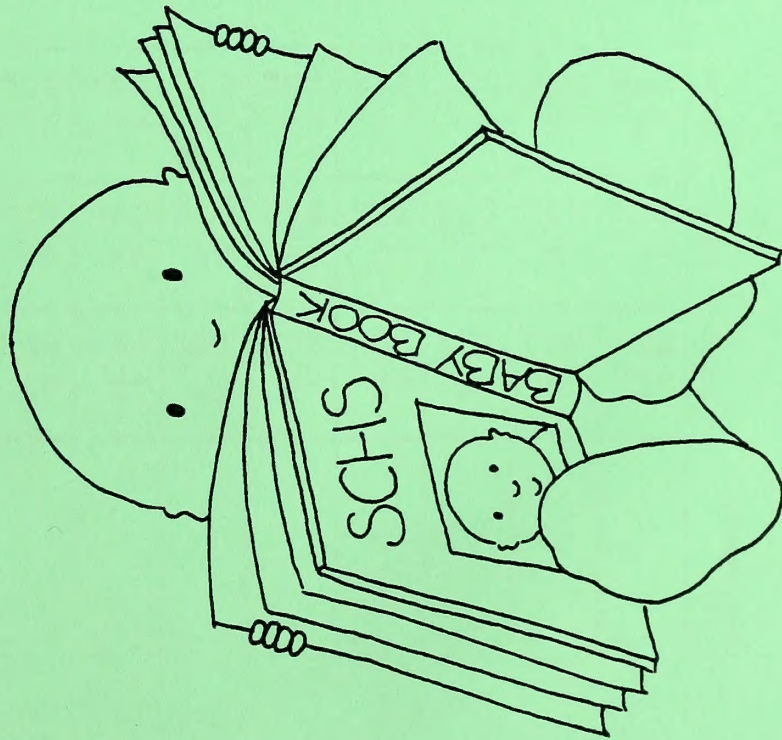

The body of the table is divided into cells formed by dashed lines. Each cell is divided into two rows by a dashed line. The first row (labeled "COUNT") is the number of births with a specific condition or conditions and birth weight in grams for minority women. In example 2 the number of births that had assisted ventilation and weighed less than 1,500 grams was 384. The second row (labeled row percent) is the percent of births with the specific condition or conditions that were of a particular birth weight for minority women. In example 2 the percent of newborns that had assisted ventilation that weighed less than 1,500 grams was 27.5 percent. In this example, if a birth had assisted ventilation and another condition of the newborn, then that birth would be counted three times in this table (under "assisted ventilation," "all others," and "one or more"). However, the birth is counted only once in the column total.

For another example, in Table 20, if a birth had several of the listed events of labor and/or delivery, it would be counted in each applicable row and under "one or more."
